

Project Design Phase – Part 2

Creating an Sponsored Post for Instagram

Team ID : NM2023TMID02308

Open Source Frameworks

- Django: A popular Python web framework that could be used to build a backend for managing sponsored posts.
- Social-Auth-App: A Python library that could be used to authenticate users with Instagram and other social media platforms.
- Instagram-API: A Python library that provides a wrapper for the Instagram API.
- Celery: A Python task queue that could be used to asynchronously process sponsored posts.
- Redis: An in-memory data store that could be used to cache data about sponsored posts.
